Application No.: 09/940,349

Docket No.: JCLA7911-R2

In The Claims:

Please amend claims as follows:

1. (Currently Amended) An optical disc device for changing intensities of light beams

illuminated on an optical disc when recording and reproducing on/from the optical disc, the

optical disc device comprising:

a photo detecting device divided into a plurality of photo detectors for detecting reflected

light beams of the light beams illuminated on an optical disc;

a plurality of amplifiers for changing gains to respectively amplify output signals of the

photo detectors when recording and reproducing on/from the optical disc; and

a calculating device for calculating output signals of the amplifiers to generate servo signals,

wherein correction offset signals for correcting offset voltages of the amplifiers and the photo

detectors are added to the amplifiers, respectively, and are amplified by the amplifiers, and the

correction offset signals are independent to gains of the amplifiers and the correction offset

signals have with a fixed value determined by the offset voltages of the photo detectors and the

offset voltages of the amplifiers. are previously added to the inputs of the amplifiers.

2. (Original) The optical disc device of claim 1, wherein the calculating device further

comprises a first calculating device and a second calculating device for respectively performing

different operations on the output signals of the amplifiers, wherein the correction offset signals

respectively added to the amplifiers further comprise a first correction offset value that eliminates

Docket No.: JCLA7911-R2

the offset voltages from a result of the first calculating device, and a second correction offset value that eliminates the offset voltages from a result of the second calculating device.

3. (Original) The optical disc device of claim 2, wherein the correction offset signals respectively added to the amplifiers are signals separated from the first and the second correction offset values, wherein the second offset value is "0" in the result of the first calculating device and the first offset value is "0" in the result of the second calculating device.
